that describes the number of arrangements(positions and/or energy levels) that are available to a system existing in a given state. Entropy is closely related to probability. The key concept is that the more ways a particular state can be achieved; the greater is the likelihood (probability) of finding that state.

Chapter 16 - Spontaneity, Entropy, and Free Energy

Gibbs Free Energy is used to determine whether a reaction is favored or disfavored. It is given by the equation: $\Delta G = \Delta H - T\Delta S$. Where ΔH is the enthalpy change, ΔS is the entropy change, and T is the temperature. If $\Delta G < 0$, then products are favored at
