Aquaculture Law and Policy - Taylor & Francis

The National Aquaculture Act of 1980 is a U.S. federal law that is intended to promote and support the development of aquaculture. The act aims to encourage development of aquaculture in the United States because aquaculture has the potential to reduce the U.S. trade deficit in fisheries products, augment existing commercial and recreational fisheries, and produce other renewable resources.

With aquaculture operations fast expanding around the world, the adequacy of aquaculture-related laws and policies has become a hot topic. This much-needed book provides a three-part guide to the complex regulatory landscape. The expert contributors first review the international legal dimensions, including chapters on law of the sea, trade, and access and benefit sharing.

Aquaculture Law and Policy

In the absence of specific policy, aquaculture development is mainly based on development plans elaborated by the authorities in charge for the administering the sector but without formal approval. Participatory mechanisms concerned with the definition of policy mostly comprise unofficial consultations, with three exceptions.

2. Aquaculture policy, administration and legislation

The National Aquaculture Act of 1980 established aquaculture as a national policy priority for the United States and created the Interagency Working Group on Aquaculture as the institutional structure through which NOAA coordinates with other federal agencies on aquaculture-related activities. Disturbances in societal resilience and reduction in social capital can be associated with shifts toward high-capital aquaculture. Resource conflicts can rapidly arise when traditional users feel that aquaculture is encroaching on their "patch" (Orchard et al. 2015). However, most of these defined disturbances to traditional societies are ...

Aquaculture is projected to be the prime source of seafood as demand grows from the global middle class and wild capture fisheries approach their maximum take. Sustainable aquaculture is a dynamic concept and the sustainability of an aquaculture system will vary with species, location, societal norms and the state of knowledge and technology.
