The design of gravity retaining walls (including reinforced soils, segmental gravity retaining walls and cantilever retaining walls) was previously governed principally by overturning about the toe. However, using AS 4678-2002, design for forward sliding or bearing now often governs the design process.

Cheers AS 4678-2002: Earth-retaining structures This Standard sets out requirements and recommendations relating to the design and construction of structures required to retain soil, rock and other materials. Probably more suited to the engineering types amongst us but that can be said for a lot of standards.
