AWS D1.3/D1.3M:2018 Structural Welding Code - Sheet Steel. This code covers the requirements associated with welding sheet steel having a minimum specified yield point no greaterthan 80 ksi [550 MPa]. The code requirements cover any welded joint made from the commonly used structural quality low-carbon hot rolled and cold rolled sheet and strip ...

AWS D1.3/D1.3M:2018 - Structural Welding Code - Sheet Steel
You can also create non-code assisted documents (for documents not using ASME Section IX and AWS D1.1) in ProWrite by turning code-assistance off. When the Welding Inspector or Production Manager can visually see that the document was created utilizing code-assistance, they have an additional level of confidence in the result.

D1.3 is for sheet steel applications. D1.1 is for structural plate, pipe, and shape applications. There is a cross over in available thickness of the above products in the 1/8 to 3/16 range. Real easy answer, if you are welding on sheet steel in this range then use the D1.3.

D1.1 vs D1.3.....? - **American Welding Society**
D1.3 is not contained in D1.1, but it is referred to, and D1.1 is referred to in D1.3. D1.1 is limited to steels less than 1/8" thick, and states that when metals thinner than 1/8" are to be welded, the requirements of D1.3 should apply. As far as I can see, there would be no basis for procedure qualifications for sheet metals in D1.1.

D1.1 vs. D1.3 - American Welding Society
AWS D1.8 is intended to be used on steel structures, where D1.1 applies. D1.8 should not, for example, be used to supplement AWS D1.6 Structural Welding Code—Stainless Steel7. See D1.8, clause 1.3. AWS D1.8 references the AWS A5 Filler Metal Specifications. Of particular interest is the reference to AWS
