An eclipse is an astronomical event that occurs when an astronomical object or spacecraft is temporarily obscured, by passing into the shadow of another body or by having another body pass between it and the viewer. This alignment of three celestial objects is known as a syzygy. Apart from syzygy, the term eclipse is also used when a spacecraft reaches a position where it can observe two ...

Eclipse - Wikipedia

Eclipse is an integrated development environment (IDE) used in computer programming. It contains a base workspace and an extensible plug-in system for customizing the environment.

Eclipse (software) - Wikipedia

During this penumbral lunar eclipse, the Earth's main shadow does not cover the Moon. As the Earth's shadow (umbra) misses the Moon during a penumbral lunar eclipse, there are no other locations on Earth where the Moon appears partially or totally eclipsed during this event.

Eclipses visible in Denver, Colorado, USA

the total or partial obscuring of one celestial body by another. A solar eclipse occurs when the moon passes between the sun and the earth; a lunar eclipse when the earth passes between the sun and the moonSee also total eclipse, partial eclipse, annular eclipse Compare occultation the period of time during which such a phenomenon occurs

Eclipse | Definition of Eclipse at Dictionary.com

A total solar eclipse occurs when the Moon completely covers the Sun, as seen from Earth. Totality during such an eclipse can only be seen from a limited area, shaped like a narrow belt, usually about 160 km (100 mi) wide and 16,000 km (10,000 mi) long. Areas outside this track may be able to see a partial eclipse of the Sun.

Types of Solar and Lunar Eclipses

A solar eclipse occurs when the moon passes between the sun and the Earth. An observer within the umbra will witness a total solar eclipse, while someone within the penumbra will observe a partial solar eclipse.

Eclipse - definition of eclipse by The Free Dictionary
