Graphing a Rational Function Rational function $f(x) = \frac{p(x)}{q(x)}$; Steps for Graphing - Step 1: Simplify $f(x)$: if possible, by factoring the numerator $p(x)$ and denominator $q(x)$; From the factorization, A) Identify the Domain of the function. B) Note any resulting "Hole(s)". Step 2: Find and plot the x-intercepts and y-intercept of the function (if they exist).

Graphing a Rational Function - Metropolitan Community College

When graphing a rational polynomial, first mark the vertical asymptotes and the x-intercepts. Then choose a number c between any consecutive pairs of these marked points on the x-axis and see if the rational function is positive or negative when $x = c$. If it's positive, draw a dot above the x-axis whose first coordinate is c .

Exercise Set 2.3: Rational Functions MATH 1330 Precalculus 229 Recall from Section 1.2 that an even function is symmetric with respect to the y-axis, and an odd function is symmetric with respect to the origin. This can sometimes save time in graphing rational functions. If a function is even or odd, then half of the function can be

How To: Given a graph of a rational function, write the function. Determine the factors of the numerator. Examine the behavior of the graph at the x-intercepts to determine the zeroes and their multiplicities. (This is easy to do when finding the "simplest" function with small multiplicities—such as 1 or 3—but may be difficult for larger multiplicities—such as 5 or 7, for example.)

Graphing Rational Functions with Holes A rational function is a quotient of two functions. The graph of a rational function usually has vertical asymptotes where the denominator equals 0. However, the graph of a rational function will have a hole when a value of x causes both the numerator and the denominator to equal 0.
