Mechanical refrigerated inlet system used to cool the inlet air of the gas turbine. Centrifugal compressors are typically used for large systems in excess of 1,000 tons ( $12.4 \times 10^6$  BTU/ $13.082 \times 10^6$  kJ) and would be driven by an electric motor. Mechanical refrigeration has significantly high auxiliary power consumption for the compressor driver and pumps required for the cooling water circuit.
